Quick Summary Table above shows potentially effective oral antibiotic(s) for the above-noted bacteria (assumes mono-antimicrobial therapy, unless otherwise specified). Detected antimicrobial resistance gene(s) (as applicable) has(have) been integrated into antibiotic selection. Based on patient-specific clinical data, multi-antimicrobial therapy might be indicated in some cases (see Summary Antibiogram below).***

Detected

! Potential resistance to Trimethoprim and/or Sulfamethoxazole.

PERSONALIZED SUMMARY ANTIBIOGRAM

Antibiotic Table Legend:

(++): BEST ACTIVITY, >90% of bacterial cultural isolates are sensitive.
 (+): GOOD ACTIVITY, 70-90% of bacterial cultural isolates are sensitive.
 (±): VARIABLE ACTIVITY, 50-70% of bacterial cultural isolates are sensitive.
 (0): Non-Recommended antimicrobial;
Note: Personalized (patient specific) data included in this report, are a correlation of detected microbes and antimicrobial resistance genes (if any), with national antimicrobial sensitivity data.
 Administration Mode: po = oral, IV = intravenous, IM = intramuscular, OP = ophthalmic, OT = otic.
 Some antibiotics might not be available in the US (see www.pdr.net, www.drugs.com, or www.rlist.com for current information).

MEET WITH OUR CLINICAL EXPERTS

Real-Time polymerase chain reaction (TaqMan qPCR) was utilized for detection. Microbial sensitivity testing is not performed at this lab. Testing performed by AIT Laboratories (a HealthTrackRx Company; 1500 Interstate 35W, Denton TX 76207; CLIA# 45D2009077). This test was developed and its performance characteristics determined by American Institute of Toxicology, Inc. It has not been cleared or approved by the FDA. However, such approval/clearance is not required, as the laboratory is regulated and qualified under CLIA to perform high-complexity testing. This test is used for clinical purposes, and should not be regarded as investigational or for research.

**National Infectious Disease Consensus Data

***Potentially effective oral antibiotics, based on presence of detected microbes, antimicrobial resistance genes, and national antimicrobial sensitivity data (see Summary Antibiogram).
