

# Diagnosing STIs with Confidence

The symptoms of Sexually Transmitted Infections (STIs) often overlap with Urinary Tract Infections (UTIs) or vaginitis.

When a patient presents with unclear genitourinary symptoms, HealthTrackRx menus can help identify the cause, to get patients healthier faster.

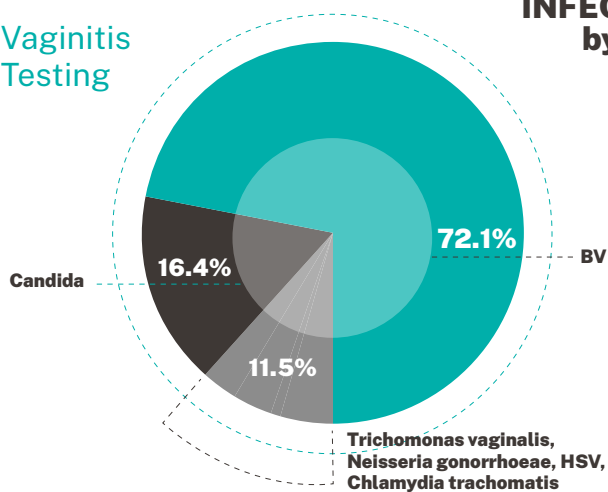

**11.5%** of vaginitis cases are actually caused by an STI

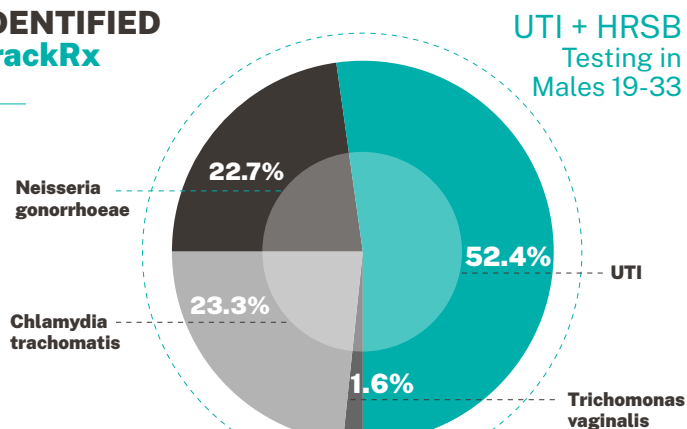

**47.6%** of samples taken from men 19-33 tested for UTI and STI, identified an STI

## Vaginitis Testing

## INFECTIONS IDENTIFIED by HealthTrackRx

## UTI + HRSB Testing in Males 19-33

### ASSOCIATED PANELS
