

RESPIRATORY TREND REPORT

Rhinovirus/Enterovirus remains the most common respiratory virus circulating nationwide, though its activity has dipped slightly over the past two weeks, now representing 33% of positive results. As we move further into the respiratory season, other viruses are beginning to rise. Parainfluenza infections continue to climb, while Adenovirus activity has seen a modest uptick as well. RSV is starting to gain traction, reaching 1.3% nationally with notably higher levels in Florida. COVID-19 rates have eased following summer peaks, and Enterovirus D68 has held steady around 3%. Influenza activity remains low overall but is beginning to climb, with higher positivity rates seen in several states including Florida, Pennsylvania, Texas, Wisconsin, and Wyoming.

- ▶ Rhinovirus/Enterovirus: Remains dominant but decreased to 33%.
- ▶ Parainfluenza (types 1–4): Increased from 7% to 8.5%, continuing to rise early in the respiratory season.
- ▶ Adenovirus: Slight increase from previous weeks from 2.1% to 2.7%.
- ▶ Respiratory Syncytial Virus (RSV): Increase to 1.30%, with levels reaching as high as 6.0% last week in Florida.
- ▶ COVID-19 (SARS-CoV-2): Declined from 3.6% to 3.0%, consistent with tapering circulation after summer peaks.
- ▶ Enterovirus D68: Minimal increase from 2.9% to 3.0%, remaining steady over the last two weeks.
- ▶ Influenza A & B: Increase to 0.9%, with higher positivity rates noted in Florida, Pennsylvania, Texas, Wisconsin, and Wyoming.

HTRx Seasonal Outlook

- ▶ Rhinovirus/Enterovirus is expected to remain a major driver of respiratory illness through October but is not expected to significantly climb as RSV and Influenza begin to more widely circulate and dominate the respiratory landscape.
- ▶ Parainfluenza virus is showing modest growth and may contribute more substantially to early fall cases.
- ▶ COVID-19 continues to wane but should be monitored closely for potential shifts with seasonal changes.
- ▶ RSV and Influenza are continuing to climb with higher positivity rates already noted in certain states.

Trending Up

- ▶ Parainfluenza virus (types 1, 2, 3, 4)
- ▶ Adenovirus
- ▶ Respiratory syncytial virus (RSV)
- ▶ Influenza A&B

Trending Down

- ▶ Rhinovirus/Enterovirus
- ▶ COVID-19 Coronavirus (SARS-CoV-2)

Remaining Level

- ▶ Coronavirus (229E, NL63, OC43, and HKU1)
- ▶ Human metapneumovirus
- ▶ Enterovirus D68
